

Synthetic Data from Industrial Sensor Monitoring

Overview

This dataset contains sensor readings from five industrial production lines, capturing temperature and pressure measurements with labeled anomalies.

Dataset Structure

- 5 separate CSV files, one for each production line
- Each file contains timestamps, temperature readings, pressure readings, and anomaly labels
- Format: timestamp, temperature (°C), pressure (bar), anomaly (0=normal, 1=anomaly)

How to Use

1. Download all CSV files to your local environment
2. Each file can be loaded using standard data analysis tools (Python pandas, R, etc.)
3. Example Python code:

```
import pandas as pd
df = pd.read_csv('File.csv')
```

```
